The peak of the eclipse is projected to happen during our school dismissal and during the time buses would be on the road. This period of time on April 8th would create the most difficult visual driving conditions for bus drivers. As we look to potentially avoid any visual safety conditions by having students and drivers on the road during the eclipse, what would your family preference for April 8th be at this time? Please note: Alternative Options to the regular day must be approved by all parties as calendar changes.
